

T 8026 EN

Type 3244-1 and Type 3244-7 Pneumatic Control Valves

Type 3244 Three-way Valve · DIN and ANSI versions

Application

Mixing or diverting valve for process engineering and industrial applications

Valve size DN 15 to 150 · NPS ½ to 6

Pressure rating PN 10 to 40 · Class 150 and 300

Temperatures -196 to +450 °C · -325 to +842 °F

Type 3244 Three-way Valve with

- Type 3271 Pneumatic Actuator (Fig. 1)
- Type 3277 Pneumatic Actuator (Fig. 2) for integral positioner attachment

Valve body made of

- Cast iron (DIN version only)
- Cast steel
- Cast stainless steel

Undivided valve bonnet. Optional with RFID tags with unique device marking according to DIN SPEC 91406.

The control valves, designed according to the modular assembly principle, can be equipped with various accessories: Positioners, limit switches, solenoid valves and other accessories according to IEC 60534-6 ¹⁾ and NAMUR recommendation (see Information Sheet ► T 8350 for more details).

Versions

Standard version designed for temperatures from -10 to +220 °C (15 to 430 °F) with pneumatic actuator

- **Type 3244-1** (Fig. 1) · Type 3244 Valve with Type 3271 Actuator (see Data Sheet ► T 8310-1)
- **Type 3244-7** (Fig. 2) · Type 3244 Valve and Type 3277 Pneumatic Actuator for integral positioner attachment (see Data Sheet ► T 8310-1)

Further versions

- **Insulating section or bellows seal** · See Technical data
- **Adjustable packing** · Details on request
- **Heating jacket**
- **Additional handwheel** · See Data Sheet ► T 8310-1
- **Type 3244-2 Electric Control Valve** · Details on request
- **Type 3244-3 Manually Operated Valve** with Type 3273 Hand-operated Actuator · See Data Sheet ► T 8312

¹⁾ Accessories required. See associated actuator documentation.

Fig. 1: Type 3244-1 Pneumatic Control Valve with Type 3271 Actuator

Fig. 2: Type 3244-7 Pneumatic Control Valve with Type 3277 Actuator

Principle of operation (Fig. 3 and Fig. 4)

Depending on the version, the three-way valve can be used for either mixing or diverting service.

In mixing valves, the process media to be mixed enter at valve ports **A** and **B**. The combined flow exits the valve at port **AB** (see Fig. 3). The flow rate from ports **A** or **B** to **AB** depends on the cross-sectional area of flow between the seats and plugs.

In diverting valves, the process medium enters at the valve port **AB** and the partial flows exit at ports **A** and **B** (see Fig. 4).

Note: The design of the mixing and diverting valves in sizes DN 15 to 25 (NPS ½ to 1) is identical.

Fail-safe position

Depending on how the springs are arranged in the pneumatic actuator (► T 8310-1), the valve has two different fail-safe positions effective upon air supply failure.

- **Actuator stem extends:** when the supply air fails, port **B** is closed in mixing valves and port **A** is closed in diverting valves.
- **Actuator stem retracts:** when the supply air fails, port **A** is closed in mixing valves and port **B** is closed in diverting valves.

Fig. 3: Type 3244-1 Pneumatic Control Valve with Type 3244 Three-way Valve (plug arrangement for mixing service, DN 15 to 25 for diverting service as well, and Type 3271 Actuator with additional handwheel)

Fig. 4: Type 3244-7 Pneumatic Control Valve with Type 3244 Three-way Valve, DN 32 to 150 (plug arrangement for diverting service), additional bellows seal and Type 3277 Actuator

Notes on the differential pressures (Table 3.1 to Table 4.2)

- Differential pressures in parentheses refer to the values for half travel in parentheses in the bench range column
- The tables apply to both fail-safe positions.
- The springs in actuators with fail-safe action "actuator stem retracts" cannot be preloaded.
- v2 is added to the diaphragm area (e.g. 175v2 cm²) to indicate actuators with a full diaphragm.
